

Brownells Alignment and Pin Punches are available in four diameters to match the majority of pin sizes found on AR-15-type rifles, 1911 Auto pistols, Remington 870/1100/11-87 shotguns, and many Ruger revolvers. Two materials are used, steel drill rod and brass, both with easy-grip, push handles that resist rolling off your bench.

WARNING

Never attempt to disassemble or reassemble a firearm unless you are absolutely certain that it is empty and unloaded. Visually inspect the chamber, the magazine and firing mechanism to be absolutely certain that no ammunition remains in the firearm. Disassembly and reassembly should follow the manufacturer's instructions. If such instructions are not immediately available, contact the manufacturer to see if they are available. If they are not available at all, then you should consult other reference sources such as reference books or persons with sufficient knowledge. If such alternative sources are not available and you have a need to disassemble or reassemble the firearm, you should proceed basing your procedures on common sense and experience with similarly constructed firearms.

With regard to the use of these tools, the advice of Brownells Incorporated is general. If there is any question as to a specific application it would be best to seek out specific advice from other sources and not solely rely on the general advice and warnings given.

HOW TO USE

Brownells Alignment and Pin Punches are designed as push punches for hand use, and should not be struck with hammers. The end of each punch is slightly tapered for about 1/4" to use in aligning parts so their proper pins can be inserted. If the end of the punch becomes damaged in use, it can be dressed back into shape with a fine-cut file and/or 400 grit wet-or-dry sandpaper.

Reassemble the firearm according to the manufacturer's instructions. Check for proper functioning using **ACTION PROVING DUMMIES**. Make sure **ALL SAFETY MECHANISMS** are fully functional as designed and approved by the manufacturer. If these tests prove satisfactory, test-fire the firearm with live ammunition in a **SAFE** and **APPROPRIATE** manner. **IMPORTANT!** Start the live ammunition tests by first loading an **ACTION PROVING DUMMY**, then a live round, into the magazine. Only after several tests have been conducted in this manner should additional rounds be placed in the magazine and fired.

WARNING: This product contains a chemical know to the State of California to cause cancer, birth defects and other reproductive harm.
